

**Practice: 643 - Restoration and Management of Rare and Declining Habitats****Scenario: #1 - Wildlife Structures, Low Complexity****Scenario Description:**

This scenario is for the installation of wildlife structures on all land uses where the targeted species has been identified as Rare and Declining and when habitat assessment indicates Inadequate Habitat for Fish or Wildlife-habitat degradation. Structures are of low complexity. This scenario includes structures such as: habitat boxes, perch poles, fence markers, down logs and hand built brush piles. Complexity is defined by the combination of skill level, equipment needed and ease of accessibility for creating and installing these structures. For this scenario the complexity would include; general labor with minimal supervision or skilled labor without supervision; common hand tools and equipment; installation is within a quarter mile of a drivable road; and terrain is gentle to moderate. Facilitating practices may include but not limited to: 382, 391, 647, 660 and 666.

**Before Situation:**

A habitat assessment (using State Office approved habitat assessment method, protocol or tool) has indicated a need for wildlife structures of low intensity with low complexity to bring one or more habitat limiting factors under Inadequate Habitat for Fish or Wildlife, up to planning criteria. Habitat limiting factors include quality, quantity and continuity of forage, cover, shelter, space and water availability. The structures can be installed within a quarter mile of a drivable road and terrain is gentle to moderate. (consider all the fence markers as one structure)

**After Situation:**

Installation of wildlife structures bring the identified deficient habitat limiting factors up to planning criteria. The practice is installed using general labor with minimal supervision or skilled labor without supervision with use of common hand tools and small equipment;

**Scenario Feature Measure:** Number of structures

**Scenario Unit:** Each

**Scenario Typical Size:** 4

**Scenario Cost:** \$1,331.57

**Scenario Cost/Unit:** \$332.89

**Cost Details (by category):**

|--------------------------------------|------|--|------|-----------------|----------|----------|
| <b>Equipment/Installation</b>        |      |  |      |                 |          |          |
| Auger, Post driver attachment        | 934  | Auger or post driver attachment to a tractor or skidsteer. Does not include power unit. Labor not included.  | Hour | \$8.18          | 1        | \$8.18   |
| Truck, Pickup                        | 939  | Equipment and power unit costs. Labor not included.  | Hour | \$36.36         | 2        | \$72.72  |
| Chainsaw                             | 937  | Equipment and power unit costs. Labor not included.  | Hour | \$6.16          | 2        | \$12.32  |
| Tractor, agricultural, 60 HP         | 963  | Agricultural tractor with horsepower range of 50 to 90. Equipment and power unit costs. Labor not included.  | Hour | \$22.93         | 1        | \$22.93  |
| <b>Labor</b>                         |      |  |      |                 |          |          |
| Equipment Operators, Light           | 232  | Includes: Skid Steer Loaders, Hydraulic Excavators <50 HP, Trenchers <12", Ag Equipment <150 HP, Pickup Trucks, Forklifts, Mulchers  | Hour | \$24.50         | 1        | \$24.50  |
| General Labor                        | 231  | Labor performed using basic tools such as power tool, shovels, and other tools that do not require extensive training. Ex. pipe layer, herder, concrete placement, materials spreader, flagger, etc. | Hour | \$22.96         | 16       | \$367.36 |
| Supervisor or Manager                | 234  | Labor involving supervision or management activities. Includes crew supervisors, foremen and farm/ranch managers time required for adopting new technology, etc.                                     | Hour | \$45.14         | 8        | \$361.12 |
| <b>Materials</b>                     |      |  |      |                 |          |          |
| Post, Wood, CCA treated, 6" x 12-14' | 13   | Wood Post, Line/End 6" X 12-14', CCA Treated. Includes materials and shipping only.  | Each | \$26.08         | 4        | \$104.32 |
| Predator Guard                       | 1461 | Predator guards (i.e. stove pipes, cone, hole guard, etc.) for habitat boxes. Materials only. Includes material and shipping only.   | Each | \$28.58         | 4        | \$114.32 |
| Habitat Box, waterfowl               | 1449 | Wood Duck Box, typically 24" x 11" x 12" with 4" wide oval entrance, single. Includes material and shipping only.  | Each | \$69.82         | 2        | \$139.64 |
| Habitat Box, Bat                     | 246  | BAT-1 Bat House Single. Includes materials and shipping.   | Each | \$52.08         | 2        | \$104.16 |

**Practice: 643 - Restoration and Management of Rare and Declining Habitats****Scenario: #2 - Wildlife Structures , High Complexity****Scenario Description:**

This scenario is for the installation of wildlife structures on all land uses where the targeted species has been identified as Rare and Declining and when habitat assessment indicates Inadequate Habitat for Fish or Wildlife-habitat degradation. Structures are of high complexity. This scenario includes all the structures in the Wildlife Structures-low and medium scenarios but whose installation may require medium to high intensity with high complexity. This scenario may include the installation structures that require the use of heavy (150+ horse power) equipment. Complexity is defined by the combination of skill level, equipment needed and ease of accessibility for creating and installing these structures. For this scenario the complexity would include: skilled labor and general labor with supervision; common hand tools to heavy equipment; for many of the structures, installation is within a mile of a road: and terrain is moderate to difficult. Facilitating practices may include but not limited to: 382, 391, 647, 660 and 666.

**Before Situation:**

A habitat assessment (using State Office approved habitat assessment method, protocol or tool) has indicated a need for wildlife structures of medium to high intensity with high complexity to bring one or more habitat limiting factors of inadequate habitat for fish and wildlife, up to planning criteria. (Also included are sites where the planning criteria would require wildlife structures of low intensity but high complexity or high intensity but low complexity) Habitat limiting factors include quality, quantity and continuity of forage, cover, shelter, space and water availability. Many of the needed structures can be installed within a mile of a drivable road and the terrain will range from moderate to difficult.

**After Situation:**

Installation of wildlife structures bring the identified deficient habitat limiting factors up to planning criteria. Installation of wildlife structures required skilled labor and general labor with supervision and the use of common hand tools to heavy equipment.

**Scenario Feature Measure:** Number of structures

**Scenario Unit:** Each

**Scenario Typical Size:** 12

**Scenario Cost:** \$4,967.71

**Scenario Cost/Unit:** \$413.98

**Cost Details (by category):**

| Equipment Operators, Heavy           | 233  | Includes: Cranes, Hydraulic Excavators >=50 HP, Dozers, Paving Machines, Rock Trenchers, Trenchers >=12", Dump Trucks, Ag Equipment >=150 HP, Scrapers, Water Wagons.                                | Hour | \$38.68         | 6        | \$232.08   |
| General Labor                        | 231  | Labor performed using basic tools such as power tool, shovels, and other tools that do not require extensive training. Ex. pipe layer, herder, concrete placement, materials spreader, flagger, etc. | Hour | \$22.96         | 60       | \$1,377.60 |
| <b>Materials</b>                     |      |  |      |                 |          |            |
| Habitat Box, waterfowl               | 1449 | Wood Duck Box, typically 24" x 11" x 12" with 4" wide oval entrance, single. Includes material and shipping only.  | Each | \$69.82         | 5        | \$349.10   |
| Habitat Box, Bat                     | 246  | BAT-1 Bat House Single. Includes materials and shipping.   | Each | \$52.08         | 5        | \$260.40   |
| Predator Guard                       | 1461 | Predator guards (i.e. stove pipes, cone, hole guard, etc.) for habitat boxes. Materials only. Includes material and shipping only.   | Each | \$28.58         | 12       | \$342.96   |
| Post, Wood, CCA treated, 6" x 12-14' | 13   | Wood Post, Line/End 6" X 12-14', CCA Treated. Includes materials and shipping only.  | Each | \$26.08         | 12       | \$312.96   |

**Mobilization**

**Mobilization**

|                                    |      |  |      |         |   |         |
|------------------------------------|------|--|------|---------|---|---------|
| Mobilization, very small equipment | 1137 | Equipment that is small enough to be transported by a pick-up truck with typical weights less than 3,500 pounds. Can be multiple pieces of equipment if all hauled simultaneously. | Each | \$69.63 | 1 | \$69.63 |
|------------------------------------|------|--|------|---------|---|---------|

**Practice: 643 - Restoration and Management of Rare and Declining Habitats****Scenario: #4 - Monitoring, & Management, Low Intensity and Complexity - No Foregone Income****Scenario Description:**

Setting is any land use with the potential to provide habitat for species of plants and animals identified as Rare and Declining and the habitat potential is not currently being captured. The identified habitat limiting factors can be restored, enhanced or created, with the application of this practice alone, or in combination with other supporting and facilitating practices. Monitoring will be used to determine if the conservation system meets or exceeds the minimum quality criteria for the targeted wildlife. Management will be implemented based on the findings of the habitat assessment and monitoring. Habitat management and monitoring needed to treat the resource concerns requires no training, no qualitative data assessment, no water quality monitoring and is low in complexity and intensity. Examples of prescribed monitoring, include but are not limited to: photo points taken, use documentation by livestock, regeneration/breeding success, completing an annual management records log, documenting wildlife sightings, documenting location and species of invasive plants and condition of vegetative and structural treatments. No decision or treatment associated with this practice or facilitating practices will require income foregone. The planner will specify locations and identify the methods to the customer who will implement the monitoring and management plan.

**Before Situation:**

Existing degraded plant conditions and resulting inadequate habitat for fish and wildlife have resulted in low use of the area by target species identified as Rare and Declining and associated species.

**After Situation:**

Based on the results of a State-approved upland wildlife habitat assessment process, the application of habitat management efforts and prescribed monitoring have been implemented. With the application of this practice alone, or in combination with other supporting and facilitating practices, the inadequate habitat conditions have been addressed. Monitoring has maximized the benefits of the needed habitat treatment efforts.

**Scenario Feature Measure: Acres Managed and Monitored****Scenario Unit:** Acre**Scenario Typical Size:** 100**Scenario Cost:** \$1,396.55**Scenario Cost/Unit:** \$13.97**Cost Details (by category):**

|--|-----|--|------|--------|---|---------|

**Mobilization**

|                               |      |  |      |          |   |          |
|-------------------------------|------|--|------|----------|---|----------|
| Mobilization, small equipment | 1138 | Equipment <70 HP but can't be transported by a pick-up truck or with typical weights between 3,500 to 14,000 pounds. | Each | \$169.60 | 1 | \$169.60 |
|-------------------------------|------|--|------|----------|---|----------|

**Practice: 643 - Restoration and Management of Rare and Declining Habitats****Scenario: #7 - Topographic Feature Creation, Low Complexity & Intensity - No Foregone Income****Scenario Description:**

Setting is any land use with the potential to provide habitat for species of plants and animals identified as Rare and Declining and the habitat potential is not currently being captured. This scenario is typically occurs on lands used for the production of forest products, grazing and/or fish and wildlife where the slope gradient is less than two percent and predominant soils are not excessively drained. The State-approved habitat evaluation or appraisal found that a limiting factor for species of plants and animals identified as rare and declining is the absence of sufficient variability in microtopographic relief in the area. The construction of low intensity and low complexity topographic features will provide for diverse soil hydrologic conditions needed to treat the degraded plant condition and/or inadequate habitat for rare and declining species. The construction of micro and macro topographic features can be implemented with the use of equipment with less than 70 HP. This scenario is for earthwork, not associated with habitat structures or any other national standard (e.g. Wetland Restoration (657), Wetland Enhancement (659), Wetland Creation (658), and Dike (356)).

**Before Situation:**

The site lacks sufficient micro- and macrotopographic features needed for optimal habitat for target rare and declining species. Typically the site has been previously manipulated and utilized for agricultural, livestock or forest production. With the loss of hummocks, depressions and other topographic features scattered throughout the site, both plant and animal species that are dependent on the microenvironments created by these features are no longer present or are in decline within the planning unit.

**After Situation:**

Appropriate low horsepower equipment, such as, rubber tired tractor and farm implements (i.e. – box blade, scraper blade, grader blade, front end-loader, etc) were used to construct planned topographic features essential for identified species. As a result of the installation, the topographic relief needed to provide the varied habitat needs is provided.

**Scenario Feature Measure:** number and size of constructed features

**Scenario Unit:** Acre

**Scenario Typical Size:** 50

**Scenario Cost:** \$13,530.50

**Scenario Cost/Unit:** \$270.61

**Practice: 643 - Restoration and Management of Rare and Declining Habitats****Scenario: #10 - Establish Annual Vegetation - Broadcast w/ Fertilization (FI)****Scenario Description:**

This scenario is for the establishment of annual (non-persistent) vegetation on all land uses where the targeted species has been identified as Rare and Declining. This scenario is utilized when habitat assessment indicates Inadequate Habitat for Fish or Wildlife-habitat degradation. The typical size range for this scenario is 5 to 50 acres. This scenario would be applied on any land use where habitats are utilized by species identified as rare & declining. This practice scenario is typically used to reduce soil erosion, reduce soil quality degradation, improve water quality and develop wildlife habitat as part of a habitat management system. Often times this scenario is utilized to temporarily provide cover or forage while permanent vegetation is being established. Vegetation will be established utilizing conventional methods including disking, herbicide application and broadcast seeding. Fertilization will be required and will be completed in response to a soil test.

**Before Situation:**

A habitat assessment (using State Office approved habitat assessment method, protocol or tool) has indicated a need to establish annual (non-persistent) vegetation to bring one or more habitat limiting factors of inadequate habitat for fish and wildlife, up to planning criteria. An evaluation of the site has indicated resource concerns are present, or may become present during the implementation of the habitat management system planned. Resource concerns identified may include soil erosion with visible rills present resulting in sediment moving offsite into surface water degrading water quality. Soil quality (soil organic matter) declines over time as a result of tillage practices, low residue, and long periods of bare soil. Air quality may be impacted during field operations by the creation of particulates. The current system provides little to no wildlife habitat with habitat limiting factors such as quality, quantity and continuity of forage, cover, shelter and space being identified.

**After Situation:**

Planning unit is adequately covered with annual (non-persistent) vegetation. As a result of installation soil erosion, water/sediment runoff, and/or dust emissions have been eliminated. Plants sown provide cover and forage for target species. Forage may include the vegetation itself or promote an abundance of beneficial insects. This scenario does not apply to plantings for forage production or critical area plantings and vegetation established under this scenario will remain unharvested.

**Scenario Feature Measure:** Area planted**Scenario Unit:** Acre**Scenario Typical Size:** 25**Scenario Cost:** \$12,179.41**Scenario Cost/Unit:** \$487.18**Cost Details (by category):**

| <b>Materials</b>   |      |  |      |                 |          |            |
| Herbicide, Glyphosate                                      | 334  | A broad-spectrum, non-selective systemic herbicide. Refer to WIN-PST for product names and active ingredients. Includes materials and shipping only. | Acre | \$15.83         | 25       | \$395.75   |
| Two Species Mix, Cool Season Annual (1 grass and 1 legume) | 2314 | Cool season annual grass and legume mix. Includes material and shipping only.  | Acre | \$50.33         | 25       | \$1,258.25 |
| <b>Mobilization</b>  |      |  |      |                 |          |            |
| Mobilization, medium equipment                             | 1139 | Equipment with 70-150 HP or typical weights between 14,000 and 30,000 pounds.  | Each | \$252.16        | 1        | \$252.16   |

**Practice: 643 - Restoration and Management of Rare and Declining Habitats****Scenario: #14 - Topdressing for Wildlife****Scenario Description:**

Nitrogen, potassium and phosphorus are applied to existing cool season grassland to promote a desirable plant community for wildlife food and cover. Application rate is based on recommendations from a soil test targeting wildlife habitat. Application rate should not be based on production agriculture. Fertilizer is applied during the growing season.

**Before Situation:**

Grass stand is thinning due to lack of nutrients or high acidity in the soil, and no longer provides adequate cover and/or food for grassland nesting birds or other grassland dependent wildlife.

**After Situation:**

Fertilizer has been applied according to a soil test and using appropriate equipment. The new vegetative conditions are conducive to use by target grassland nesting birds and other grassland dependent wildlife.

**Scenario Feature Measure:** Acre of existing grassland

**Scenario Unit:** Acre

**Scenario Typical Size:** 10

**Scenario Cost:** \$488.80

**Scenario Cost/Unit:** \$48.88

| Fertilizer, ground application, dry bulk | 950 | Dry bulk fertilizer application performed by ground equipment. Includes equipment, power unit and labor costs.                | Acre  | \$6.28          | 10       | \$62.80  |
| <b>Materials</b>                         |     |   |       |                 |          |          |
| Potassium, K2O                           | 74  | K2O supplied by Muriate Of Potash. Price is not per pound of total product applied, no conversion is needed.                  | Pound | \$0.28          | 400      | \$112.00 |
| Phosphorus, P2O5                         | 73  | Price per pound of P2O5 supplied by Superphosphate. Price is not per pound of total product applied, no conversion is needed. | Pound | \$0.39          | 400      | \$156.00 |
| Nitrogen (N), Ammonium Nitrate           | 69  | Price per pound of N supplied by Ammonium Nitrate. Price is not per pound of total product applied, no conversion is needed.  | Pound | \$0.79          | 200      | \$158.00 |

**Practice: 643 - Restoration and Management of Rare and Declining Habitats****Scenario: #1 - Oyster Bar - Purchase and place****Scenario Description:**

Restore oyster bar by placing shell on the bottom to create a 2-inch thick shell base. Oyster spat may be seeded or recruited via natural spatfall.

**Before Situation:**

Bay or tidal river bottom where conditions are appropriate for oyster growth and survival, but lacking shell and oyster production. The resource concern is lack of habitat associated with oyster bars and oyster reproduction. The lack of living oyster bars negatively effects water quality because oysters can remove significant quantities of nutrients and sediments.

**After Situation:**

One acre of oyster bar will be restored. The bar will consist of 2 acre-inches of shell bed. The restored oyster bar will be able to support oyster growth and reproduction, and provide habitat for many other aquatic species. The living oysters will remove significant quantities of nutrients and sediments, thereby enhancing water quality. These bars will be maintained by oyster farmers to ensure survival of the bar, and will be harvested and replenished to maintain healthy functioning.

**Scenario Feature Measure:**

**Scenario Unit:** Acre

**Scenario Typical Size:** 1

**Scenario Cost:** \$10,679.72

**Scenario Cost/Unit:** \$10,679.72

**Practice: 643 - Restoration and Management of Rare and Declining Habitats****Scenario: #1 - Oyster Bar - Dredge, purchase, place****Scenario Description:**

Restore oyster bar by dredging bottom multiple times to reclaim shell from sediments. Then purchase and place an additional inch of shell to create a 2-inch thick shell base. Oyster spat may be seeded or recruited via natural spatfall.

**Before Situation:**

Bay or tidal river bottom where conditions are appropriate for oyster growth and survival, but lacking shell and oyster production. Enough shell is present but buried in shallow sediments to dredge up 50% of the necessary shell to create a 2-inch shell base. The other 50% of shell must be purchased. The resource concern is lack of habitat associated with oyster bars and oyster reproduction. The lack of living oyster bars negatively effects water quality because oysters can remove significant quantities of nutrients and sediments.

**After Situation:**

One acre of oyster bar will be restored. The bar will consist of 2 acre-inches of shell bed. The restored oyster bar will be able to support oyster growth and reproduction, and provide habitat for many other aquatic species. The living oysters will remove significant quantities of nutrients and sediments, thereby enhancing water quality. These bars will be maintained by oyster farmers to ensure survival of the bar, and will be harvested and replenished to maintain healthy functioning.
